INTRODUCTION

SQUAD RUNNER! is a top Trending Casual game you don't want to miss launching on your Own account.

Here is a Quick documentation to get you started, up and running in no time.If you Have any questions or requests, feel free to post a comment in the commants section of The game in SellMyApp.

PREREQUISITES

This game has been made using Unity 2019.4.17f1, so please be sure to use the same version or a higher version to avoid any Errors.

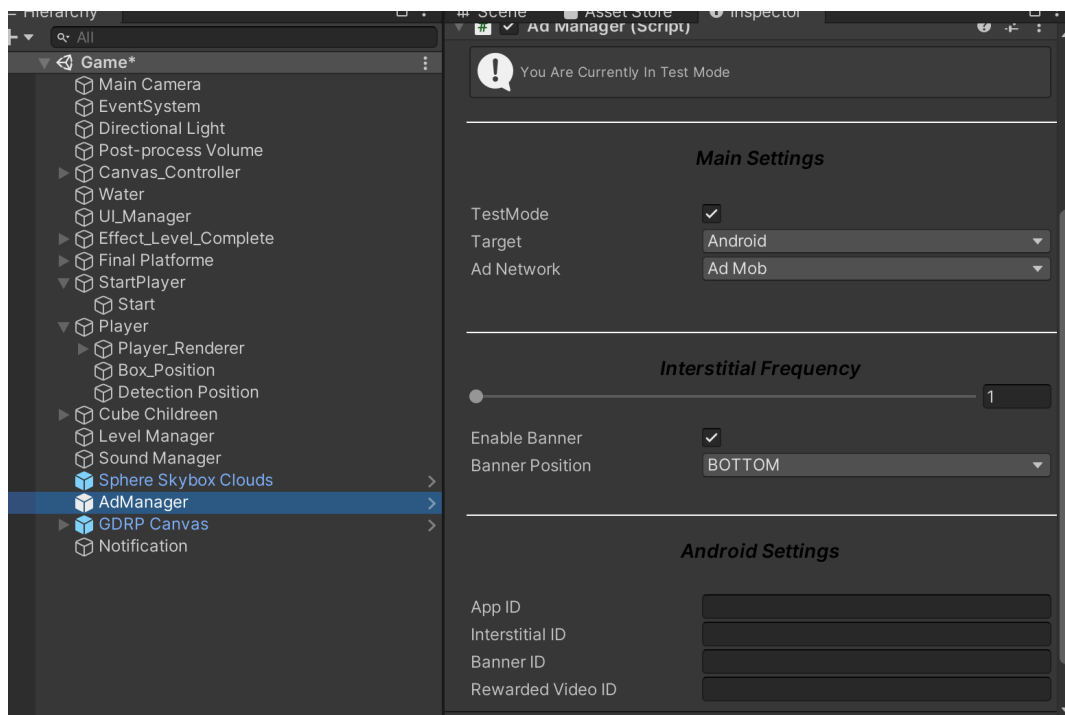

ADVERTISEMENTS

Advertisements have been made simple, you can use either Unity Ads or AdMob as your ads provider.

In the Hierarchy, select AdManager and check the Inspector.

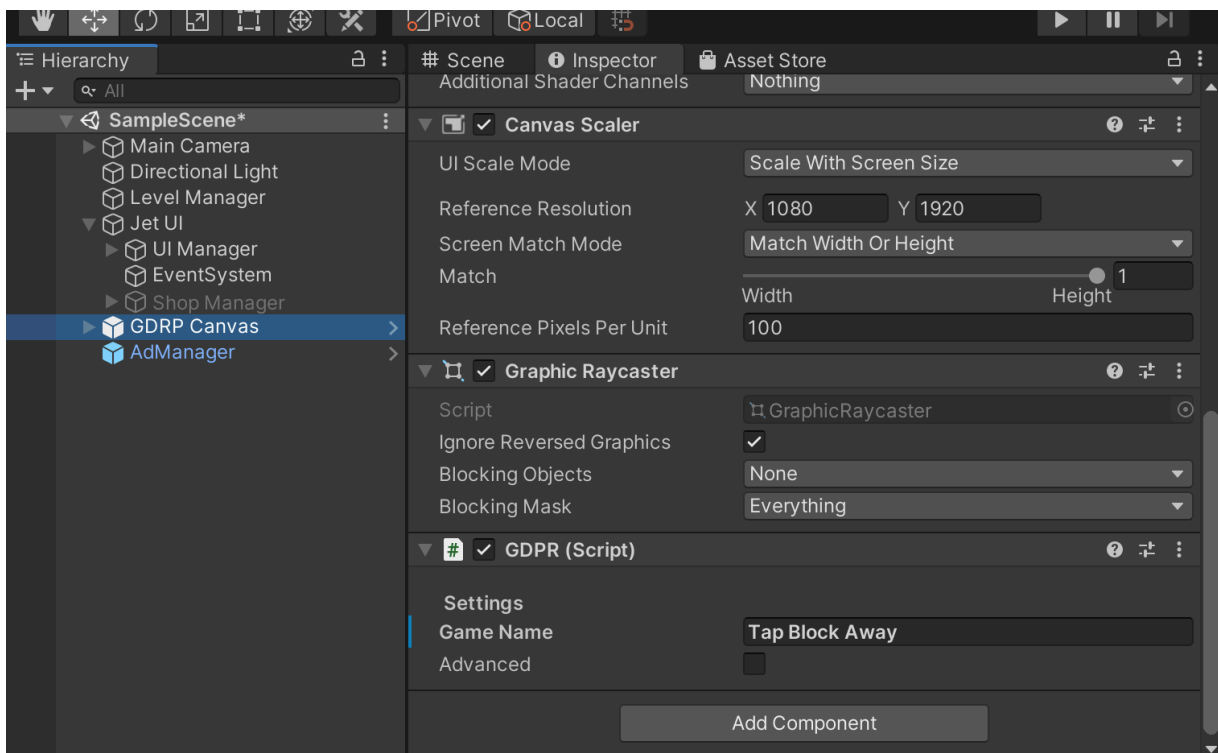

Follow these steps to make sure everything is properly setup:

- 1- Uncheck -TestMode- if you Wish to display real ads.
- 2- Select your Target, Android / iOS
- 3- Select your Ad Network AdMob / Unity Ads.
- 4- Setup the amount of Method Calls to display an interstitial after each race/
- 5- Enter your Ids.

To quickly configure the GDPR, select the —GDPR Canvas — GameObject in the Hierarchy, then check the Inspector.

Under the GDPR script, write your game name, and you are all set ! : D

FURTHER CUSTOMIZATION

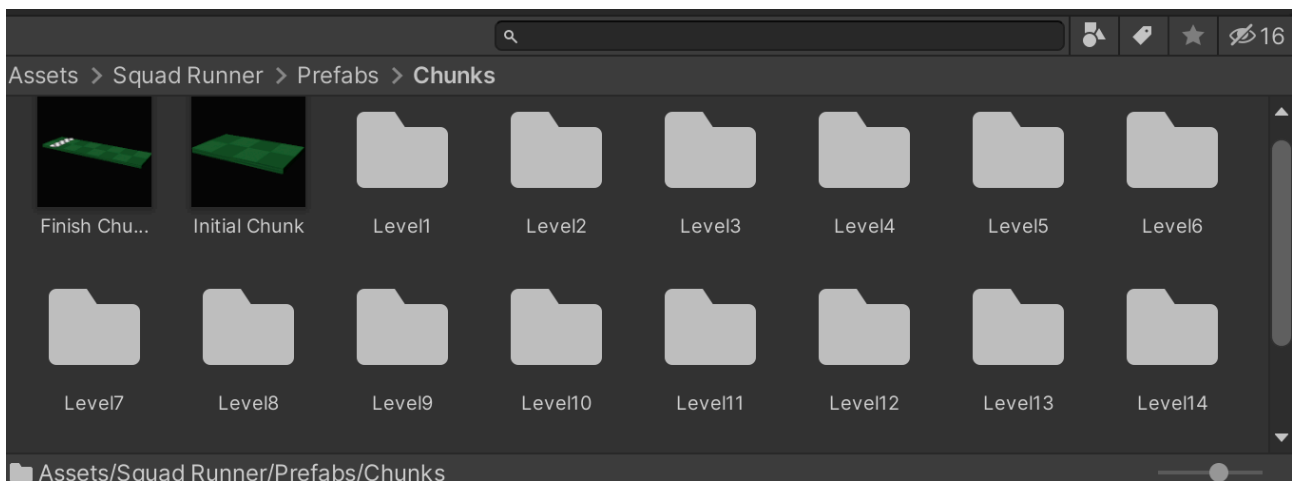

You can change the textures & materials of the basic elements by editing

ADDING MORE LEVELS

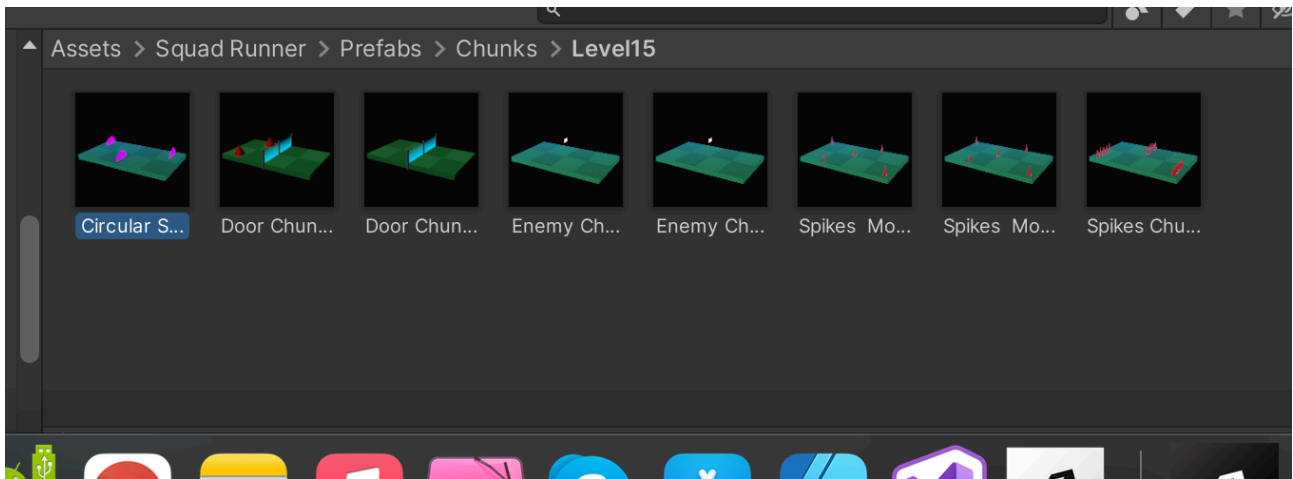

You can add more levels to the games if you want to add your special touch to it.

Here's how to do it.

First, open the Prefabs folder, you will find the Chunks folders

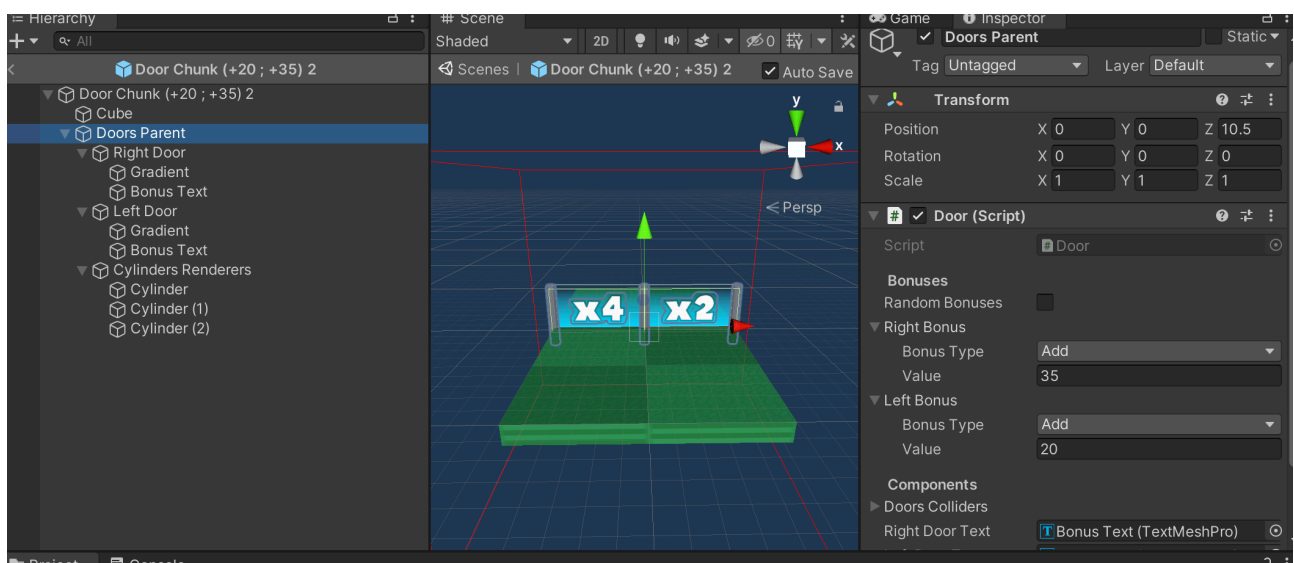

Duplicate the levels and then start changing each prefabs.

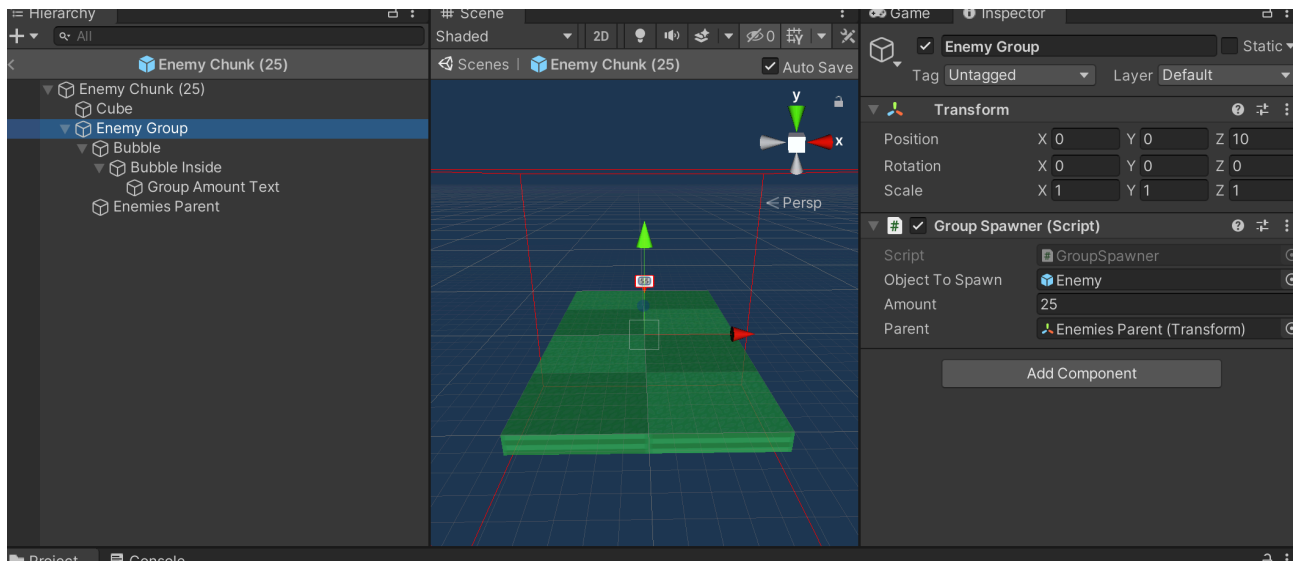

Open the Level Prefabs Create :

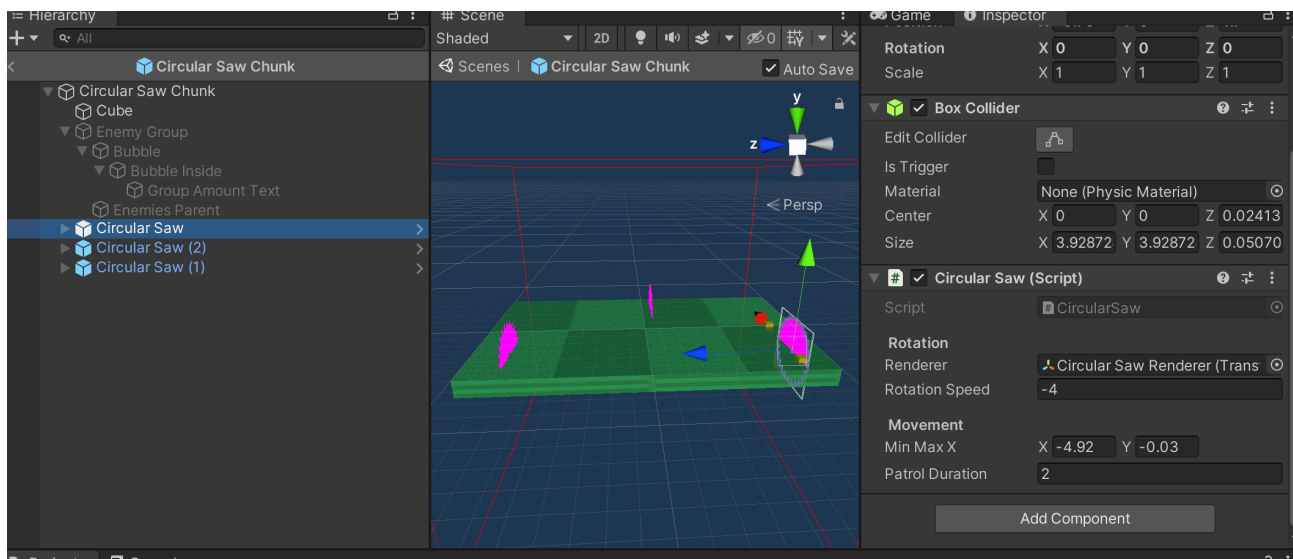

1-At the door, change the numbers of players on the right and on the left.

2-You can change the number of enemies :

3-Change the Obstacles platform:

It's very easy to Create levels.

Thank you

Thank you for Reading this documentation & purchasing the game. I do hope You had a great time customizing the game.

If you have any questions or any request, feel free to post a comment in the Comments section of this game.
